

SAT Solver Heuristics

SAT-solver History

- Started with David-Putnam-Logemann-Loveland (DPLL) (1962)
 - Able to solve 10-15 variable problems
- Satz (Chu Min Li, 1995)
 - Able to solve some 1000 variable problems
- Chaff (Malik et al., 2001)
 - Intelligently hacked DPLL , Won [the 2004 competition](#)
 - Able to solve some 10000 variable problems
- Current state-of-the-art
 - MiniSAT and SATELITEGTI (Chalmer's university, 2004-2006)
 - Jerusat and Haifasat (Intel Haifa, 2002)
 - Ace (UCLA, 2004-2006)

MiniSAT

- MiniSat is a **fast SAT solver** developed by Niklas Eén and Niklas Sörensson
 - MiniSat **won all industrial categories** in SAT 2005 competition
 - MiniSat **won SAT-Race 2006**
- MiniSat is simple and well-documented
 - **Well-defined interface** for general use
 - Helpful implementation **documents** and **comments**
 - **Minimal but efficient** heuristic
 - Main.C (344 lines)
 - Solver.C (741 lines)

Overview (1/2)

- A set of propositional variables and CNF clauses involving variables
 - $(x_1 \vee x_1' \vee x_3) \wedge (x_2 \vee x_1' \vee x_4)$
 - x_1, x_2, x_3 and x_4 are variables (true or false)
- Literals: Variable and its negation
 - x_1 and x_1'
- A clause is satisfied if one of the literals is true
 - $x_1 = \text{true}$ satisfies clause 1
 - $x_1 = \text{false}$ satisfies clause 2
- Solution: An assignment that satisfies all clauses

Overview (2/2)

- **Unit clause** is a clause in which **all but one of literals** is assigned to **False**
- **Unit literal** is the **unassigned literal** in **a unit clause**

$$\begin{aligned} & \dots\dots \\ & (x_0) \wedge \\ & (-x_0 \vee x_1) \wedge \\ & (-x_2 \vee -x_3 \vee -x_4) \wedge \end{aligned}$$

- (x_0) is a unit clause and ' x_0 ' is a unit literal
 - $(-x_0 \vee x_1)$ is a unit clause since x_0 has to be True
 - $(-x_2 \vee -x_3 \vee -x_4)$ can be a unit clause if the current assignment is that x_3 and x_4 are True
- **Boolean Constraint Propagation(BCP)** is the process of assigning the True value to all unit literals

DPLL Overview (1/3)

$$(p \vee r) \wedge (\neg p \vee \neg q \vee r) \wedge (p \vee \neg r)$$

DPLL Overview (2/3)

/* The Quest for Efficient Boolean Satisfiability Solvers

* by L.Zhang and S.Malik, Computer Aided Verification 2002 */

```
DPLL(a formula  $\mathcal{A}$ , assignment) {  
    necessary = deduction( $\mathcal{A}$ , assignment);  
    new_asgnment = union(necessary, assignment);  
    if (is_satisfied( $\mathcal{A}$ , new_asgnment))  
        return SATISFIABLE;  
    else if (is_conflicting( $\mathcal{A}$ , new_asgnment))  
        return UNSATISFIABLE;  
    var = choose_free_variable( $\mathcal{A}$ , new_asgnment);  
    asgn1 = union(new_asgnment, assign(var, 1));  
    if (DPLL( $\mathcal{A}$ , asgn1) == SATISFIABLE)  
        return SATISFIABLE;  
    else {  
        asgn2 = union (new_asgnment, assign(var,0));  
        return DPLL ( $\mathcal{A}$ , asgn2);  
    }  
}
```

Three techniques added
to modern SAT solvers

1. Learnt clauses
2. Non-chronological
backtracking
3. Restart

DPLL Overview (3/3)

/* overall structure of Minisat solve procedure */

```
Solve(){
    while(true){
        boolean_constraint_propagation();
        if(no_conflict){
            if(no_unassigned_variable) return SAT;
            make_decision();
        }else{
            if (no_decisions_made) return UNSAT;
            analyze_conflict();
            undo_assignments();
            add_conflict_clause();
        }
    }
}
```

Search Space for SAT Formula \hat{A}

Suppose that \hat{A}
has 10,000
variables

Ordering x_i 's: VSIDS
Pruning: Learnt clause
Guiding: Restart, non-chronological back tracking

Conflict Clause Analysis (1/10)

- A conflict happens when one clause is falsified by unit propagation

Assume x_4 is False

$(x_1 \vee x_4) \wedge$

$(\neg x_1 \vee x_2) \wedge$

$(\neg x_2 \vee x_3) \wedge$

$(\neg x_3 \vee \neg x_2 \vee \neg x_1)$ Falsified!

Omitted clauses

- Analyze the **conflicting clause** to infer a clause
 - $(\neg x_3 \vee \neg x_2 \vee \neg x_1)$ is conflicting clause
- The inferred clause is a new knowledge
 - A new learnt clause is added to constraints

Conflict Clause Analysis (2/10)

- Learnt clauses are inferred by conflict analysis

$(x_1 \vee x_4) \wedge$
 $(\neg x_1 \vee x_2) \wedge$
 $(\neg x_2 \vee x_3) \wedge$
 $(\neg x_3 \vee \neg x_2 \vee \neg x_1) \wedge$
omitted clauses \wedge
 (x_4) learnt clause

- They help prune future parts of the search space
 - Assigning False to x_4 is the casual of conflict
 - Adding (x_4) to constraints prohibit conflict from $\neg x_4$
- Learnt clauses actually drive backtracking

Conflict Clause Analysis (3/10)

```
/* conflict analysis algorithm */
Analyze_conflict(){
    cl = find_conflicting_clause();
    /* Loop until cl is falsified and one literal whose value is determined in current
    decision level is remained */
    While(!stop_criterion_met(cl)){
        lit = choose_literal(cl); /* select the last propagated literal */
        Var = variable_of_literal(lit);
        ante = antecedent(var);
        cl = resolve(cl, ante, var);
    }
    add_clause_to_database(cl);
    /* backtrack level is the lowest decision level for which the learnt clause is unit
    clause */
    back_dl = clause_asserting_level(cl);
    return back_dl;
}
```

Algorithm from Lintao Zhang and Sharad malik
"The Quest for Efficient Boolean Satisfiability Solvers"

Conflict Clause Analysis (4/10)

- Example of conflict clause analysis
 - a, b, c, d, e, f, g, and h: 8 variables (2^8 cases)

$(\neg f \vee e) \wedge$
 $(\neg g \vee f) \wedge$
 $(b \vee a \vee e) \wedge$
 $(c \vee e \vee f \vee \neg b) \wedge$
 $(\neg h \vee g)$
 $(d \vee \neg b \vee h) \wedge$
 $(\neg b \vee \neg c \vee \neg d) \wedge$
 $(c \vee d)$

Satisfiable?

Unsatisfiable?

$$(-f \vee e) \wedge (-g \vee f) \wedge (b \vee a \vee e) \wedge (c \vee e \vee f \vee -b) \wedge (-h \vee g) \wedge (d \vee -b \vee h) \wedge (-b \vee -c \vee -d) \wedge (c \vee d)$$

Conflict Clause Analysis (5/10)

Assignments	antecedent
e=F	assumption
f=F	-f ∨ e
g=F	-g ∨ f
h=F	-h ∨ g
a=F	assumption
b=T	b ∨ a ∨ e
c=T	c ∨ e ∨ f ∨ -b
d=T	d ∨ -b ∨ h

DLevel=1

DLevel=2

Example slides are from CMU 15-414 course ppt

$$(-f \vee e) \wedge (-g \vee f) \wedge (b \vee a \vee e) \wedge (c \vee e \vee f \vee -b) \wedge (-h \vee g) \wedge (d \vee -b \vee h) \wedge (-b \vee -c \vee -d) \wedge (c \vee d)$$

Conflict Clause Analysis (6/10)

Assignments	antecedent
e=F	assumption
f=F	-f ∨ e
g=F	-g ∨ f
h=F	-h ∨ g
a=F	assumption
b=T	b ∨ a ∨ e
c=T	c ∨ e ∨ f ∨ -b
d=T	d ∨ -b ∨ h

Resolution

- Resolution is a process to generate a clause from two clauses
- Given two clauses $(x \vee y)$ and $(\neg y \vee z)$, the **resolvent** of these two clauses is $(x \vee z)$
 - $(x \vee y) \wedge (\neg y \vee z)$ is satisfiable iff $(x \vee y) \wedge (\neg y \vee z) \wedge (x \vee z)$ is satisfiable
 - The resolvent is redundant

$$(-f \vee e) \wedge (-g \vee f) \wedge (b \vee a \vee e) \wedge (c \vee e \vee f \vee -b) \wedge (-h \vee g) \wedge (d \vee -b \vee h) \wedge (-b \vee -c \vee -d) \wedge (c \vee d)$$

Conflict Clause Analysis (7/10)

Assignments	antecedent
e=F	assumption
f=F	-fve
g=F	-gvf
h=F	-hvg
a=F	assumption
b=T	bva ve
c=T	cve vfv -b
d=T	dv -bv h

DLevel=1

DLevel=2

-bv-cvh
(a resolvent of
-bv-cv-d
and dv-bvh)

$$(-f \vee e) \wedge (-g \vee f) \wedge (b \vee a \vee e) \wedge (c \vee e \vee f \vee -b) \wedge (-h \vee g) \wedge (d \vee -b \vee h) \wedge (-b \vee -c \vee -d) \wedge (c \vee d)$$

Conflict Clause Analysis (8/10)

Assignments	antecedent
e=F	assumption
f=F	-fve
g=F	-gvf
h=F	-hvg
a=F	assumption
b=T	bva ve
c=T	cvevf v-b
d=T	d v-bvh

DLevel=1

DLevel=2

-b v -c v h

$$(-f \vee e) \wedge (-g \vee f) \wedge (b \vee a \vee e) \wedge (c \vee e \vee f \vee -b) \wedge (-h \vee g) \wedge (d \vee -b \vee h) \wedge (-b \vee -c \vee -d) \wedge (c \vee d)$$

Conflict Clause Analysis (9/10)

Assignments	antecedent
e=F	assumption
f=F	-fve
g=F	-gvf
h=F	-hvg
a=F	assumption
b=T	bva ve
c=T	cvevf v-b
d=T	d v-bvh

DLevel=1

DLevel=2

-bvevfvh

A final learnt clause since
b is the only variable
belonging to level 2

$$(-f \vee e) \wedge (-g \vee f) \wedge (b \vee a \vee e) \wedge (c \vee e \vee f \vee -b) \wedge (-h \vee g) \wedge (d \vee -b \vee h) \wedge (-b \vee -c \vee -d) \wedge (c \vee d)$$

Conflict Clause Analysis (10/10)

Assignments	antecedent
e=F	assumption
f=F	-f ∨ e
g=F	-g ∨ f
h=F	-h ∨ g
b=F	-b ∨ e ∨ f ∨ h
...	...

DLevel=1

New
assignment@
level 1

-b ∨ -c ∨ -d
-b ∨ -c ∨ h
-b ∨ e ∨ f ∨ h

Variable State Independent Decaying Sum(VSIDS)

- **Decision heuristic** to determine what variable will be assigned next
- Decision is **independent** from **the current assignment** of each variable
- VSIDS makes decisions based on **activity**
 - Activity is **a literal occurrence count** with higher weight on the more recently added clauses
 - MiniSAT does not consider any polarity in VSIDS
 - Each variable, not literal has score

activity description from Lintao Zhang and Sharad malik
"The Quest for Efficient Boolean Satisfiability Solvers"

VSIDS Decision Heuristic – MiniSAT style (1/8)

- Initially, the score for each variable is 0
- First make a decision $e = \text{False}$
 - The order between the same score is unspecified.
 - MiniSAT always assigns False to variables.

Initial constraints

$(\neg f \vee e) \wedge$
 $(\neg g \vee f) \wedge$
 $(b \vee a \vee e) \wedge$
 $(c \vee e \vee f \vee \neg b) \wedge$
 $(\neg h \vee g) \wedge$
 $(d \vee \neg b \vee h) \wedge$
 $(\neg b \vee \neg c \vee \neg d) \wedge$
 $(c \vee d)$

Variable	Score	Value
a	0	
b	0	
c	0	
d	0	
e	0	F
f	0	
g	0	
h	0	

VSIDS Decision Heuristic (2/8)

- f, g, h are False after BCP

$(\neg f \vee e) \wedge$
 $(\neg g \vee f) \wedge$
 $(b \vee a \vee e) \wedge$
 $(c \vee e \vee f \vee \neg b) \wedge$
 $(\neg h \vee g) \wedge$
 $(d \vee \neg b \vee h) \wedge$
 $(\neg b \vee \neg c \vee \neg d) \wedge$
 $(c \vee d)$

Variable	Score	Value
a	0	
b	0	
c	0	
d	0	
e	0	F
f	0	F
g	0	F
h	0	F

VSIDS Decision Heuristic (3/8)

- a is next decision variable

$(\neg f \vee e) \wedge$
 $(\neg g \vee f) \wedge$
 $(b \vee a \vee e) \wedge$
 $(c \vee e \vee f \vee \neg b) \wedge$
 $(\neg h \vee g) \wedge$
 $(d \vee \neg b \vee h) \wedge$
 $(\neg b \vee \neg c \vee \neg d) \wedge$
 $(c \vee d)$

Variable	Score	Value
a	0	F
b	0	
c	0	
d	0	
e	0	F
f	0	F
g	0	F
h	0	F

VSIDS Decision Heuristic (4/8)

- b, c are True after BCP
- Conflict occurs on variable d
 - Start conflict analysis

$(\neg f \vee e) \wedge$
 $(\neg g \vee f) \wedge$
 $(b \vee a \vee e) \wedge$
 $(c \vee e \vee f \vee \neg b) \wedge$
 $(\neg h \vee g) \wedge$
 $(d \vee \neg b \vee h) \wedge$
 $(\neg b \vee \neg c \vee \neg d) \wedge$
 $(c \vee d)$

Variable	Score	Value
a	0	F
b	0	T
c	0	T
d	0	T
e	0	F
f	0	F
g	0	F
h	0	F

VSIDS Decision Heuristic (5/8)

- The score of variable in resolvents is increased by 1
 - Even if a variable appears in resolvents multiple times increase the score just once

$(\neg f \vee e) \wedge$
 $(\neg g \vee f) \wedge$
 $(b \vee a \vee e) \wedge$
 $(c \vee e \vee f \vee \neg b) \wedge$
 $(\neg h \vee g) \wedge$
 $(d \vee \neg b \vee h) \wedge$
 $(\neg b \vee \neg c \vee \neg d) \wedge$
 $(c \vee d)$

Resolvent on d
 $\neg b \vee \neg c \vee h$

Variable	Score	Value
a	0	F
b	1	T
c	1	T
d	0	T
e	0	F
f	0	F
g	0	F
h	1	F

VSIDS Decision Heuristic (6/8)

- The end of conflict analysis
- The scores are decaying 5% for next scoring

$(\neg f \vee e) \wedge$
 $(\neg g \vee f) \wedge$
 $(b \vee a \vee e) \wedge$
 $(c \vee e \vee f \vee \neg b) \wedge$
 $(\neg h \vee g) \wedge$
 $(d \vee \neg b \vee h) \wedge$
 $(\neg b \vee \neg c \vee \neg d) \wedge$
 $(c \vee d)$

Resolvents

$\neg b \vee \neg c \vee h$

$\neg b \vee e \vee f \vee h \leftarrow$
learnt clause

Variable	Score	Value
a	0	F
b	0.95	T
c	0.95	T
d	0	T
e	0.95	F
f	0.95	F
g	0	F
h	0.95	F

VSIDS Decision Heuristic (7/8)

- b is now False and a is True after BCP
- Next decision variable is c with 0.95 score

$(\neg f \vee e) \wedge$
 $(\neg g \vee f) \wedge$
 $(b \vee a \vee e) \wedge$
 $(c \vee e \vee f \vee \neg b) \wedge$
 $(\neg h \vee g) \wedge$
 $(d \vee \neg b \vee h) \wedge$
 $(\neg b \vee \neg c \vee \neg d) \wedge$
 $(c \vee d) \wedge$

Learnt clause $(\neg b \vee e \vee f \vee h)$

Variable	Score	Value
a	0	T
b	0.95	F
c	0.95	
d	0	
e	0.95	F
f	0.95	F
g	0	F
h	0.95	F

VSIDS Decision Heuristic (8/8)

- Finally we find a model!

$(\neg f \vee e) \wedge$
 $(\neg g \vee f) \wedge$
 $(b \vee a \vee e) \wedge$
 $(c \vee e \vee f \vee \neg b) \wedge$
 $(\neg h \vee g) \wedge$
 $(d \vee \neg b \vee h) \wedge$
 $(\neg b \vee \neg c \vee \neg d) \wedge$
 $(c \vee d) \wedge$

Learnt clause $(\neg b \vee e \vee f \vee h)$

Variable	Score	Value
a	0	T
b	0.95	F
c	0.95	F
d	0	T
e	0.95	F
f	0.95	F
g	0	F
h	0.95	F
